2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 8, the prior art fails to disclose or make obvious a charged coupled-device (CCD) image sensor comprising, in addition to the other recited limitations of the claim, "a single charge-detecting capacitor receiving signal charges at different timings from one another from said charge transfer devices through an output gate to which said charge transfer devices are connected."

Regarding claim 11, the prior art fails to disclose or make obvious a ccd image sensor comprising, in addition to the other recited limitations of the claim, "photodiodes in said second diode row being staggered by a half pitch relative to photodiodes in said first diode row."

Regarding claim 12, the prior art fails to disclose or make obvious a ccd image sensor comprising, in addition to the other recited limitations of the claim, "c) third and fourth diode rows photodiodes wherein, said third row being staggered by a quarter pitch relative to photodiodes in said first diode row; and d) photodiodes in said fourth diode row being staggered by a quarter pitch relative to photodiodes in said second diode row."

Regarding claim 13, the prior art fails to disclose or make obvious a ccd image sensor comprising, in addition to the other recited limitations of the claim, "a third diode row extending in parallel with said first and second diode rows photodiodes wherein,

said third row being arranged at a pitch twice greater than a pitch at which photodiodes in said first and second rows are arranged."

Regarding claim 15, the prior art fails to disclose or make obvious a ccd image sensor comprising, in addition to the other recited limitations of the claim, "a second- or later-stage gate electrode having a projection projecting towards the previous-stage gate electrode."
